Please quote.

Marvelapp is demo.

Back end:

- needs to search forms
- add notes on forms
- print

Our technicians will need a form to fill up in back end, this is simply to notify users what they repairs and to give notes (see attachment)

Will have a activity notification

1- when user submit form it will notify them with happy welcome email (i will provide design)

2. when repair is done we will click " repair done" and an email will be send to customer

+ send a simple text message notification to user " Your repair is ready at my computer"

we already have a messaging system created to message users for promos etc -->

<https://www.mycomputeraruba.co/prizes/admin>

u: admin

p: Mormeltje12@

3. users can see their repair details in my orders (will provide ui here) it will be a status bar with 2 options :

1. were working on the repair
2. repair is done.

Will also need a button in the admin side of the specific order we can click (repair picked up)

- this will stop sending email notification + text to users

if this button is not clicked users will get text+ email every 3 days
